DETAILED ACTION

Page 2

Election/Restrictions

- This application contains claims directed to the following patentably distinct species: 1.
 - A method for manufacturing a substrate with a plasma processing system, wherein a a. pumping deposition shield coated with a film of material is obtained;
 - A method for manufacturing a substrate with a plasma processing system, wherein a liner b. coated with a film of material is obtained;
 - A method for manufacturing a substrate with a plasma processing system, wherein an optical window deposition shield coated with a film of material is obtained;
 - A method for manufacturing a substrate with a plasma processing system, wherein a d. pumping baffle plate coated with a film of material is obtained;
 - A method for manufacturing a substrate with a plasma processing system, wherein a plasma baffle assembly coated with a film of material is obtained;
 - f. A method for manufacturing a substrate with a plasma processing system, wherein a bellows shield coated with a film of material is obtained;
 - A method for manufacturing a substrate with a plasma processing system, wherein a g. shield ring coated with a film of material and a focus ring coated with a film of material are obtained;
 - h. A method for manufacturing a substrate with a plasma processing system, wherein an electrode coated with a film of material is obtained;
 - A method for manufacturing a substrate with a plasma processing system, wherein an insulating member coated with a film of material is;
 - į. A method for manufacturing a substrate with a plasma processing system, wherein an upper shield ring coated with a film of material is obtained;

Application/Control Number: 10/766,474

Art Unit: 1709

k. A method for manufacturing a substrate with a plasma processing system, wherein an inject plate assembly coated with a film of material and a process tube coated with a film of material are obtained.

The species are independent or distinct because they are mutually exclusive.

2. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Currently, claims 1-11, 14, 21, 24, and 30 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

3. A telephone call was made to Pillsbury Winthrop, LLP on 3 April, 2007, to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 1709

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be

used in a rejection under 35 U.S.C.103(a) of the other invention.

4. Any inquiry concerning this communication or earlier communications from the examiner should

be directed to Ronald D. Lafond whose telephone number is (571) 270-1878. The examiner can normally

be reached on M-F 7:30-5:00 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Michael Cleveland can be reached on (571) 272-1418. The fax phone number for the organization where

this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be obtained from

either Private PAIR or Public PAIR. Status information for unpublished applications is available through

Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC)

at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative

or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-

1000.
